

Installation Equipment

Cable Rollers and Lifting Jacks

Designed with the same fixing arrangements as the 2 bolt and Shoe cleats. The rollers and lifting jacks facilitate cable system installation. The rollers can be configured in a variety of different ways – please speak to our technical team for more information.

Rigid Tunnel Clamping Arrangement

These innovative solutions allow the installation of cables where space restrictions mean a conventional installation is not possible. If there is insufficient space to allow for thermal expansion 'sag', a rigid installation may be an option.

This solution utilises a dual set of standard cleats and offers a variety of bespoke clamping arrangements to meet the system design.

Contact the Prysmian Components technical team who will be able to help with your cable and installation design.
