

Application

Characteristics

> For cables with copper conductors

- > Prysmian's cast resin straight joints are the ideal method for jointing polymeric industrial cables where crimped connectors are required.
- > The low voltage cable jointing kits are manufactured with two types of shell design. A clear injection moulded version for smaller cable sizes, and a high impact styrene design to cover the larger ranges.
- > A lightweight two-part easy flow polyurethane resin is provided as standard, suitably packed in a foil laminated sachet offering a completely enclosed resin mixing system.

Joint Features & Benefits

- > MPJ 1, 2, 3 and 4 use injection moulded shells
- > MPJ 5, 6, 7 and 8 use high impact styrene shells (HIPS)
- > Armour bonds included
- > Tested and approved to BS EN 50393 & ENA ER C81

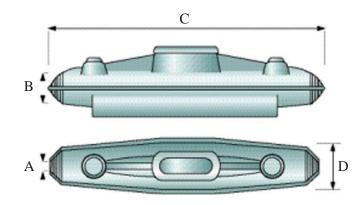

Resin Features & Benefits

- > "Twin Pack" totally enclosed mixing
- > Enhanced adhesion to XLPE and PVC
- > Improved flow characteristics
- > 40% reduction in weight
- > Easier mixing

Low Voltage Cable Jointing Kits

Selection Information

> Selection information for low voltage straight on 600/1000V polymeric insulated copper conductors, SWA cables to BS6346, BS5467 & IEC502

SELECTING

"MPJ" Straight Joints XLPE or PVC/SWA Copper Conductors

Shell Dimensions					
Joint Ref.	Min. box entry Ø 'A'	Max. box entry Ø 'B'	Box length 'C'	Internal Ø 'D'	
MPJ1	12mm	26mm	185mm	35mm	
MPJ2	14mm	32mm	245mm	48mm	
MPJ3	23mm	39mm	325mm	52mm	
MPJ4	28mm	50mm	375mm	68mm	
MPJ5	32mm	58mm	520mm	102mm	
MPJ6	45mm	75mm	705mm	124mm	
MPJ7	40mm	89mm	862mm	140mm	
MPJ8	57mm	95mm	900mm	150mm	

Notes:

- > Connectors are sold separately
- > Armour bonds are included
- *Joint does not accommodate crossed core (phase to phase) jointing.
